The Reclaimer

Liquid processing unit designed to rapidly treat blackwater and greywater to ISO30500 standards.

Combines three treatment modalities into a compact, automated system.

Treats liquid waste from household or community toilets, dewatered sludge, and septic tanks.

KEY FEATURES
• Ultrafiltration removes suspended solids and turbidity
• Activated carbon removes soluble organic material
• Electrochemical treatment removes pathogens
• “Buffered batch” processing allows system to accept liquid during operation (100-200 L/day)
• Automated process control

STATUS OF DEVELOPMENT
• Field testing in India, March 2019
• Runs on external power, no additional water required for normal operation
• Power required: 20-1350 W
